

Примеры SQL запросов:

1. SELECT COUNT(id) FROM user_model;
2. INSERT
 INTO product_model
 (name, price, weight, units, "categoryId")
 VALUES
 ('Tea Rioba black', 350, 40, 'g', 1),
 ('Nuts for life', 250, 200, 'g', 3),
 ('Beef', 970, 500, 'g', 13);
3. SELECT "categoryId" AS id
 FROM product_model
 GROUP BY "categoryId"
 HAVING COUNT(id)>5
 ORDER BY COUNT(id) DESC;
4. SELECT id,
 CASE
 WHEN "deliveryPrice">500 or status=0 or status=1 THEN 'yes'
 ELSE 'no'
 END AS update_order
 FROM order_model;
5. SELECT
 product_model.name AS name,
 product_model.price AS price,
 category_model.name AS category
 FROM product_model
 INNER JOIN category_model ON
 product_model."categoryId"=category_model.id
 WHERE price BETWEEN 200 AND 500 ;
6. SELECT
 card_model.name,
 SUM(kit_model."productsCount")
 FROM kit_model
 JOIN card_model
 ON kit_model."cardId"=card_model.id
 GROUP BY card_model.name
 ORDER BY card_model.name;
